

Aluminium Casement Windows

Performance and style

Cutting-edge design

Aluminium windows have been transformed in the past 10 years. They now offer all the flexibility and plethora of options available on a typical pvc window but aluminium windows have the added advantages of slimmer sightlines and top security.

We offer two different depths of profile; 58mm or 70mm, which means we can accommodate almost any property type. Our latest products have ovolo design details to suit very modern properties or flat profiles to suit older houses or semi-commercial installations. Aluminium windows and doors can be made in hundreds of different, very durable powder coat paint finishes. Plus, they are virtually maintenance free with a service life of over 25 years.

Environmental focus

Aluminium is a very green metal with 95% of aluminium used in buildings across Europe being recycled. Recycling aluminium is easy, energy efficient and total. We are playing our part in helping to create a sustainable environment.

Outstanding performance

Our windows and doors offer the very highest levels of performance and protection. They have excellent energy ratings, meet the targets of the sustainable homes initiative and are Police preferred "Secured by Design."
